CUSTOMIZATION & APPLICATIONS

tailored Shower solutions for every space and every design vision.

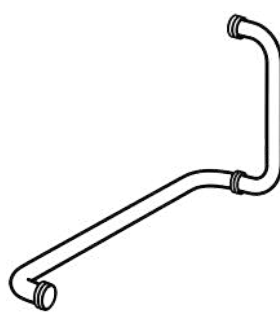

01 CUSTOMIZATION

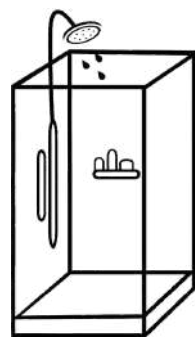

Sizes & Dimensions

Finish Options

Handle & Hardware

Layout Configurations

02 APPLICATIONS

Homes

Villas

Hotels

Apartments

Gyms / Clubhouses

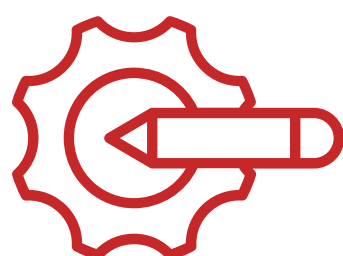

Premium Residential Areas

Farmhouses

Resorts

Customizable Against Order

Choose from multiple sizes, finishes, hardware options, and layout combinations to match your project requirements.

GLASS & SAFETY STANDARDS

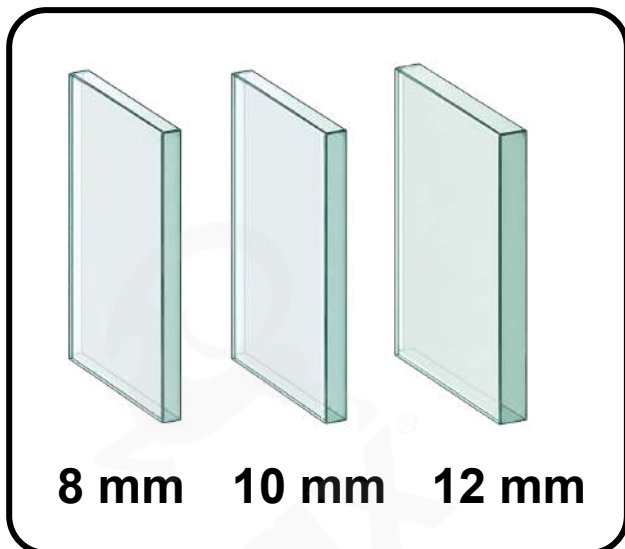

Engineered for strength, clarity, and everyday bathroom safety.

01

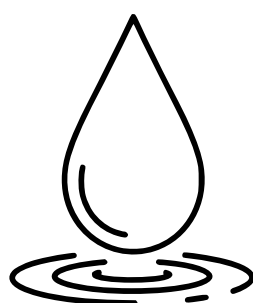

TOUGHENED GLASS COMPATIBILITY

Premium shower enclosures designed for high-quality, toughened glass with clean visibility and long-term performance.

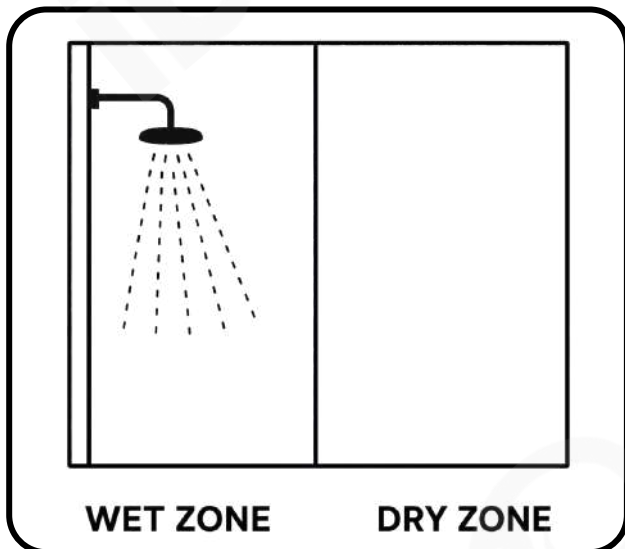

02

WET & DRY ZONE CONTROL

Shower enclosures help separate the shower area from the rest of the bathroom, reducing water splash and improving hygiene.

03

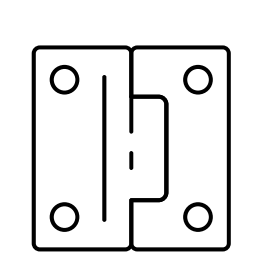

SMOOTH DOOR MOVEMENT

A controlled bottom gap of 5-8 mm supports smooth door movement, water flow management, and prevents floor friction.

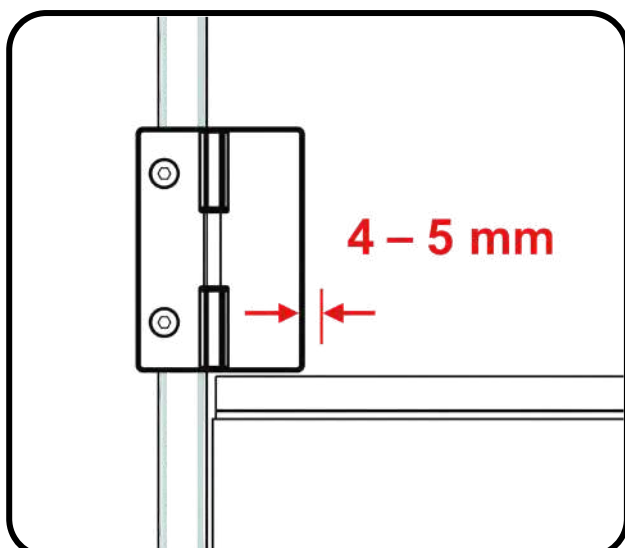

04

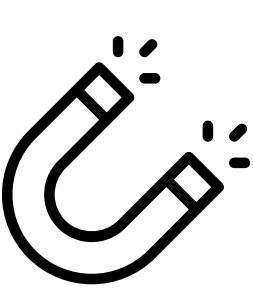

HINGE SAFETY GAP

A 4-5 mm hinge gap helps reduce glass stress and supports long-lasting hinge performance.

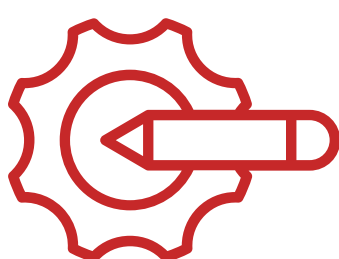

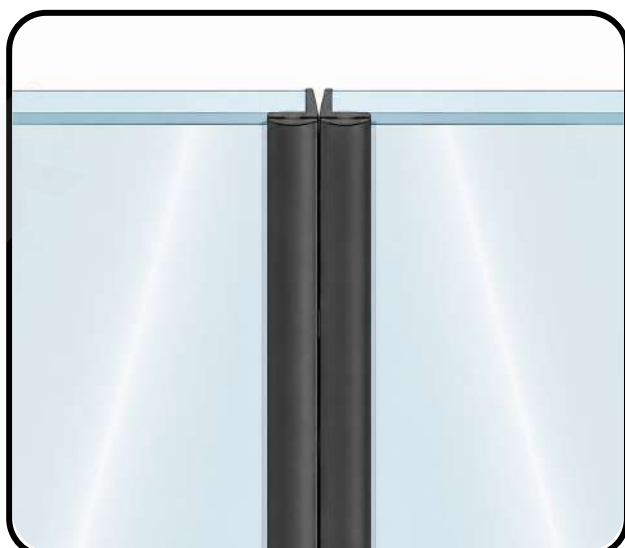

05

MAGNETIC SEAL SYSTEM

Magnetic seals provide water-tight closure, smoother locking, reduced slamming noise, and a cleaner finish.

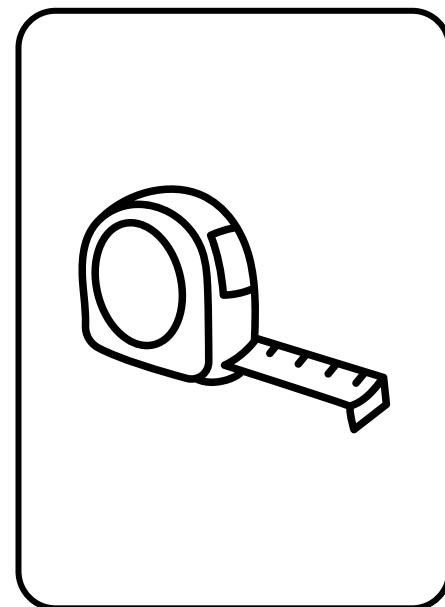

DESIGNED FOR DAILY USE

Built with slim aluminium engineering, premium finishes, magnetic closure systems, and precision detailing for strength, safety, and long-term performance.

GLASS & SAFETY STANDARDS

PRECISION FIT. CLEAN FINISH. LONG-TERM PERFORMANCE.

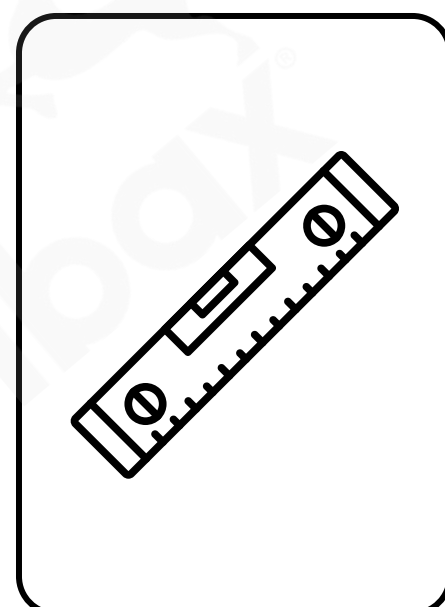

01 MEASURE AT 3 CRITICAL POINTS

Take measurements at:

Floor Level • Middle Section • Ceiling Level

Walls are rarely perfectly straight, so three-point measurement helps avoid fabrication errors, installation gaps, and uneven glass alignment.

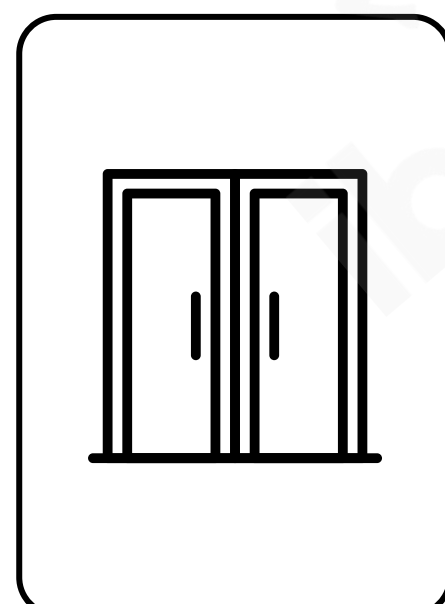

02 CHECK WALL & FLOOR LEVEL

Before installation, check:

- Wall alignment
- Floor slope
- Surface leveling
- Drainage direction

If the floor is uneven, a small ledge/veneer correction may be required before installation to maintain proper panel movement and finish.

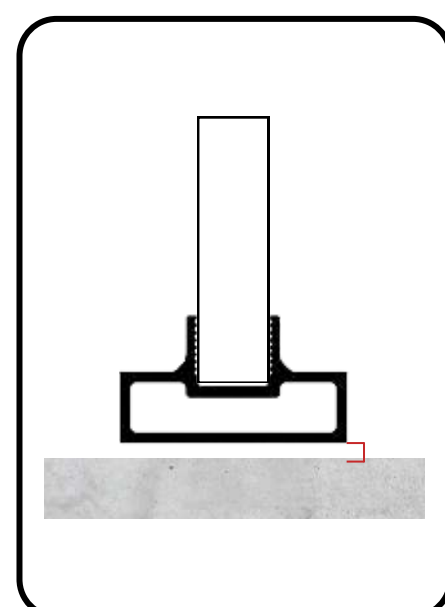

03 FULL-HEIGHT DOOR JAM

A full-size door jamb is recommended for:

- Hinge alignment
- Structural stability
- Magnetic seal accuracy
- Long-term durability

This gives the door better closing support and keeps the system stable over time.

04 TECHNICAL GAP ALLOWANCES

BOTTOM GAP

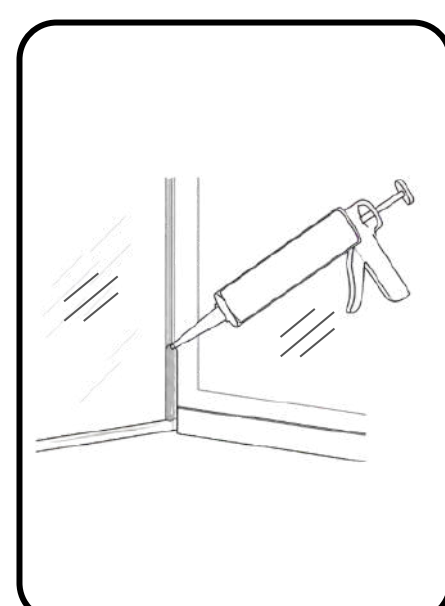

5-8 mm

For smooth door movement, water flow management, and avoiding floor friction.

DOOR / HINGE GAP

4-5 mm

For reduced glass stress, smooth opening, and better hinge performance.

05 SEAL & SILICONE DETAILING

MAGNETIC SEAL

27 inches standard

Used for water-tight closure, smooth locking, and reduced door noise.

SILICONE SEALING

Applied where needed between glass, profiles, partition edges, and door jambs for water resistance and long-term durability.

BEFORE INSTALLATION

- Wall alignment checked
- Floor leveling checked
- 3-point measurement taken
- Height confirmed
- Door jamb provision checked

DURING INSTALLATION

- 5-8 mm bottom gap
- 4-5 mm hinge gap
- Magnetic seal fitted
- Silicone applied where required

AFTER INSTALLATION

- Door alignment tested
- Magnetic lock checked
- Water leakage inspection completed
